

Same Catalytic Pocket

HD-ART allosteric encoding

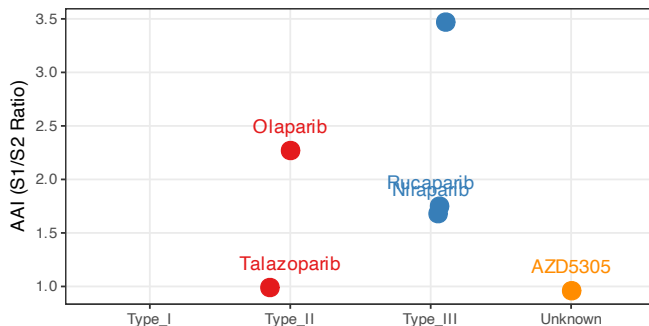

Allosteric Well Depth Spectrum

Type I/II=Shallow(Pro-retention) Type III=Deep(Pro-release)

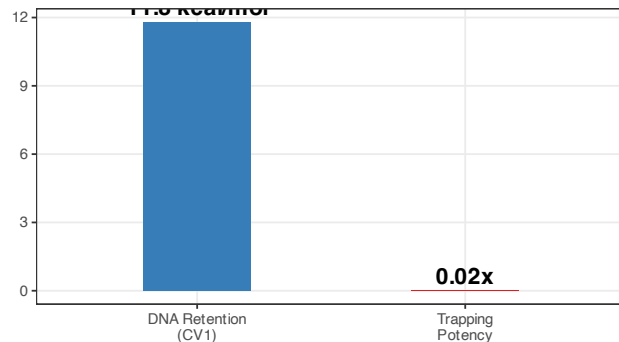

Two-Dimensional Mechanism

AAI>1=Pro-release AAI=1=Neutral AAI<1=Pro-retention

Veliparib Paradox

Strongest DNA binding, weakest trapping

Key Finding:

Trapping potency is governed by
HD allosteric encoding,
not DNA-binding strength
